Each summer the University of Washington (UW) Cooperative Institute for Climate, Ocean, and Ecosystem Studies (CICOES) places 12 undergraduate interns with UW and NOAA scientists for a ten-week summer research experience.

CICOES is committed to promoting diversity and building an inclusive community of environmental scientists. All undergraduate students, especially those traditionally under-represented in the sciences, are encouraged to apply.

RESEARCH — Research at CICOES, UW, and its NOAA partners span the range of environmental sciences with specific emphasis on climate, ocean, and ecosystem research. Possible research activities include lab work, computational modeling, and participation in field studies.

The past two years were both remote but we’re optimistic that we will return to in-person research this summer. A final decision will be made before offers are sent in March.

The chosen applicant’s research interest and abilities will be matched with UW or NOAA scientists and the needs of their research programs. Projects may be available in Alaska and Oregon as well.

INTERNSHIP BENEFITS — Students will receive a stipend of $600 per week ($6,000). CICOES also covers the cost of travel to and from Seattle and provides housing on the University of Washington campus.

APPLICATION — For more information and to apply visit cicoes.uw.edu/education/internships. Applications are due February 1, 2022.

QUESTIONS — Contact Jed Thompson at jedthom@uw.edu.

“The experience I had with UW and CICOES was honestly life changing and I could not have dreamed of an internship more geared to my research interests” ~ Lucy Roussa, 2021 intern
